BASIC-ABSTRACT:

Powder coating compsns., giving anticorrosive coating films on steel sheets,
are prep'd. by mixing thermosetting or thermoplastic resins with
chelating agents and/or tannic acid.

In an example, 100 pts. of an acrylic copolymer prep'd. from a
monomer mixt. of
glycidyl methacrylate 15, Me methacrylate 20, iso-Bu methacrylate 15,
styrene
40, and et acrylate 10% was dry mixed with TiO₂ 40.0, Modaflow 1.0,
adipic acid
7.5, and salicylic acid (chelating agent) 3.0 parts, melt mixed at 80
degrees,
and ground to give a resin powder coating compsn., which was coated
on a steel
sheet and baked 20 min at 200 degrees to give a glossy, smooth,
impact-resistant coating film with good salt water, moisture, acid,

and alkali
resistances.
